

bright NC PTCA Balloon Catheter

• Engineered to endure extreme pressure

Superior **Pushability & Trackability**

PTFE-coated hypotube with extended skive for superior pushability and trackability

Low-Profile Distal Shaft

Reduced shaft diameter for enhanced pushability and easier entry

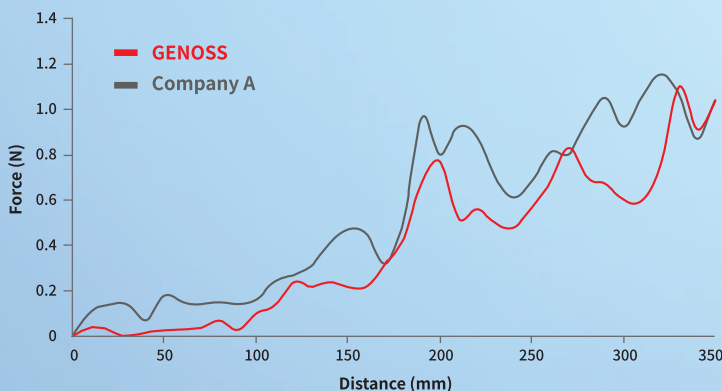

High Burst Pressure Balloon

Designed to resist expansion at higher pressures balloon material

Optimized Tapered Tip

Facilitates smooth lesion entry by minimizing resistance

Trackability

bright PTCA Balloon Catheter

• Optimized for Deliverability

Low-Profile Distal Shaft

Small outer diameter for excellent trackability in tortuous vessels

Self-Developed Hydrophilic Coating

Reduces friction for smoother device delivery and enhanced trackability

Uniform Wall Thickness

Precise wall thickness control ensures consistent balloon structure for reliable expansion and smooth lesion entry

Low-Profile Flexible Tip

Seamless, flexible design enables smooth and stable lesion entry
